

BORIS FEDOTOV

Hands-on architect & full-stack builder

PhD physics · ex-CTO/CDO · 25+ yrs delivery

LinkedIn profile

PhD physicist and serial CTO who still architects and ships the code — looking to join an existing project hands-on as architect, lead engineer or domain expert, not as an investor

Business experience

#	Dates	Description
1	2026.01 - currently	truffalo.ai GmbH, www.truffalo.ai Co-founder & CTO advisor Architecting and coding the first version end-to-end — Next.js / Node / Postgres, agentic harness, context-graph memory. Live with first pilot clients.
2	2022.01 – 2026.07	IN4COM GmbH , Austria, www.in4comgroup.com Co-founder & CTO Company management, technologies, technical partnerships, solution development and integration, operations support, technical team management. Created AVICA (https://avica.cloud) automated data-driven video content creation platform from idea to first clients.
3	2019.08 - currently	VR Motion Learning GmbH & Co KG , Austria, www.tennis-esports.com Co-founder & CIO advisor Overall technical concept, solution architecture, data integration, data management platform design and delivery, user journey analytics, AI-tools.
4	2011.01 – 2022.01	IN4COM LLC , Russia Founder & CEO Business development and customer relationships management, team management, management consultancy, solutions delivery for major international projects.
5	2007.02 – 2010.12	JASMIND Consulting LLC , Russia Managing partner Project delivery and M&A projects for the Tele2 telco group.
6	2004.02 – 2007.01	NETCRACKER Technology , U.S.A., www.netcracker.com Director of “Solutions Delivery EMEA” OSS/BSS solutions delivery across EMEA — France Telecom/Orange, Telstra, Swisscom, MTS, UPC and others.
7	1999.05 – 2004.12	PROTEK FLAGSHIP LLC , UK Solutions delivery director Software development and delivery (billing and customer care solutions).
8	1996.10 – 1999.05	T-SOFT LLC , Russia Billing solutions for PSTN and internet service providers

Hands-on architect & full-stack builder

PhD physics · ex-CTO/CDO · 25+ yrs delivery

Other information

Tech & software development courses & certificates

- | | |
|---------------------|----------------------------------|
| 1. React | 7. Docker & Kubernetes |
| 2. Next.js | 8. Data Science |
| 3. Node.js | 9. Mathematics of ML |
| 4. Python | 10. Deep Learning tools |
| 5. Git & GitHub | 11. ChatGPT prompting techniques |
| 6. AWS practitioner | 12. LangChain and RAG tools |

Languages

1. Russian – native
2. English – full business proficiency
3. German – B2
4. Italian – A2

Residence / citizenship

1. Vienna, Austria 

Open to

1. Hands-on architect / lead engineer on an existing product
2. Subject-matter expert — AI-native platforms, agentic systems, data architecture, full-stack build
3. Technical lead for delivery teams (concept, architecture, shipped code)
4. Engagement: part-time / fractional, remote or Vienna; contract or equity-for-contribution
5. Not looking to invest or co-found — looking to contribute
6. Happy to start with a coffee and a chat about what you are building))

Selected live projects, work & code

truffalo.ai · tennis-esports.com · avica.cloud · in4comgroup.com

I can only share code examples in GitHub which do not violate property rights of the corresponding enterprises which I wrote the code for. <https://github.com/fba70>

BORIS FEDOTOV

Hands-on architect & full-stack builder

PhD physics · ex-CTO/CDO · 25+ yrs delivery

Education

#	Description
1	Moscow Institute of Physics and Engineering (University), 1987-1993 Theoretical Physics, graduated with honor
2	Moscow Institute of Physics and Engineering (University), 1993-1996 Theoretical Physics, postgraduate study
3	PhD in Theoretical Physics, 1996 Surface science, non-equilibrium thermodynamics, phase transitions, classic and quantum field theories
4	Research profile with reference to scientific papers created during PhD works (published in international scientific journals) - https://www.researchgate.net/profile/Boris-Fedotov

Main areas of expertise

Where I add the most — current & hands-on

- AI-native platform architecture (agentic, context-graph memory)
- Full-stack build: React/Next.js, Node.js, Python
- System & solution architecture, data modeling
- Data architecture, EDW & data analytics solutions
- AI tools & techniques for real business use cases
- Business & technical requirements analysis
- Program/project management & delivery leadership
- Physics & mathematics (analytical foundation)

Domain depth

- Telco BSS/OSS, CS/PS-core, VAS platforms
- Telco product management
- Churn & fraud management (telco & banking)
- Operational effectiveness solutions
- AI / ML tech and tools for business applications
- Technical M&A and platform migrations
- Government master-data management
- VR / VR-LBE platforms, motion tracking & learning
- Data-driven video generation
- International business development

BORIS FEDOTOV

Hands-on architect & full-stack builder

PhD physics · ex-CTO/CDO · 25+ yrs delivery

Experience

Project management & consultancy

1. Implementation of a data-driven automated video content creation platform
2. Implementation of Esports management platform (player profiles, game statistics, leaderboards, rating and scoring systems, data analytics, integration between VR App and platform back-end)
3. Implementation of mobile Ads management platform for large telco provider (50M+ subscribers) integrating corresponding VAS platforms with PS-Core systems of the telco provider
4. Implementation of the Product catalog platform for large telco provider (50M+ subscribers)
5. Implementation of the MarTech platform for large telco provider (50M+ subscribers)
6. Intellectual operational excellence platform implementation for banks
7. Financial systems audit for major telco provider with recommendations for unified KPIs and accounting assets classification system as foundation for landscape transformation
8. Technical audit of city scale utilities BSS platform (15M citizens)
9. Company-wide business processes definition for greenfield telco provider
10. Implementation of the multiple platforms for Tele2 groups of companies ("Web Selfcare", "Web Dealer", "CRM", "KMS", "E-learning", "Product catalog", "MarTech platform", VAS platforms integration)
11. M&A support and technical migration of 6 regional cell operators (Rostelecom brand) onto centralized Tele2 BSS infrastructure (10M subscribers)
12. M&A support and technical migration of 4 regional cell operators (Indigo brand) onto centralized Tele2 BSS infrastructure
13. Netcracker (<https://www.netcracker.com/>) OSS platform implementation projects (Australia, France, Netherlands, UK, Russia). Solutions delivery department director
14. Protek Flagship BSS platform implementation projects (Liechtenstein, Slovenia, Ghana, Russia). Project manager and solutions delivery department director

Software solutions design & architectures

1. AI-native business operating system development – concept, architecture, coding and deployment to pilot customers of the first version of the system (<https://www.truffalo.ai>)
2. Data-driven automated video content creation platform AVICA - concept, data model and functional logic definition and implementation
3. VR Tennis Esports game back-end and front-end platform concept and data model development which serves as a back-end for VR game in Oculus store and manages player profiles, user journey analytics, game statistics, leaderboards, rating and scoring systems etc. (<https://tennis-esports.com/>)
4. VR LBE automation platform concept and functional design development
5. Telco product catalog concept development, detailed requirements preparation. Implementation of the platform which automated product data ETL from back-end technical platforms and distribution of standard product descriptions to target front-end platforms (website, KMS, CRM. E-learning)
6. Universal BSS platform concept and implementation for SME businesses
7. E-booking platform (airfare) for travel agents design and implementation

BORIS FEDOTOV

Hands-on architect & full-stack builder

PhD physics · ex-CTO/CDO · 25+ yrs delivery

Experience

Data management solutions

1. VR Esports game data activities collection, ETL and processing to define datasets for marketing analysis and game optimization analysis from UX perspective and popularity of certain game modes
2. Tennis Esports user journey data analytics and preparation of the data for the AI-commentator
3. Motion tracking and motion learning platform. Collection of motion tracking data, dimensional reduction, motion segmentation, features extraction, definition of motion patterns and building “motion learning libraries”, spatial and time deformations of motion learning data
4. Product information management platform concept and data model design
5. Development of the concept and solution design of the intellectual operational effectiveness platform (data sources, ETL, target datasets definition, KPIs calculation logic definition, data representation on diagrams, analysis of bottlenecks, dynamic warnings and alarms etc.)
6. Connected vehicles telematics solution drive tests for US automotive solutions manufacturer
7. Development of top-level management operational KPIs system for telco provider and implementation of the dashboard
8. Unified government data management concept development and implementation of elements of the concept within the frameworks of overall government data integration projects
9. EDW solution design (physical and logical data model & ETL processes) for major international telco provider (50M+ subscribers)

Software development

1. AI-native business operating system (<https://www.truffalo.ai>). React / Next.js, Node.js, PostgreSQL, Agentic harness solution, Context Graph solution
2. Esports data analysis solution. PostgreSQL, Python, Pandas, Python graphics libs
3. AVICA - automated data-driven video content creation platform back-end, integration and front-end application development. React / Next.js, Node.js, PostgreSQL
4. Tennis Esports back-end and front-end application (back-end data model, business logic, front-end UI, integrations, leaderboards, events) (<https://tennis-esports.com/>). React / Next.js, PostgreSQL

AI tools and techniques development

1. AI tools integration and AI-agentic platform development and integration for the AI-native business operating system (<https://www.truffalo.ai>)
2. AI tools development and integration for AVICA automated data-driven video content creation platform (generative and transformative tools for videos, graphics, texts and audio). For example, creation of Esports game summarization videos with automated context-aware commentator voice
3. Fraud & Churn management platform with ML assessment of the user data patterns and integration of the feedback into CRM and security platforms
